Amendments to the Specification:

Please replace the paragraph starting on page 1 line 16 with the following amended paragraph:

Mobile IP (v4/v6), also indicated as MIPv4 and MIPv6 enables a mobile node (MN) to register its temporary location indicated by a care-of-address (CoA) to its Home Agent (HA). ~~MIPv4 is described at <http://www.ietf.org/rfc/rfc3220.txt> MIPv6 is described in <http://www.ietf.org/internet-drafts/draft-ietf-mobileip-ipv6-21.txt>.~~ In MIP the HA then keeps a mapping (also called a binding) between the MN's permanent address, otherwise called Home Address (HoA), and the registered CoA so that packets for that MN can be redirected to its current location using IP encapsulation techniques (tunneling).
